Overall, it was a very simple application in terms of user experience. But, probably the most clear part was the inspiration page with the categorization and levels.

The redirection of the No button of the feedback pop-up to the homepage was annoying, I wasn't expecting to going to homepage. Instead, I was trying to get rid of the pop-up.

3. "Did the progress and feedback feature feel motivating or stressful?"

I think it is motivating because I can use it to improve my skills since I can see my progress in different categories and get feedback without feeling judged.

4. "If you could change one thing, what would it be?"

I would change the behavior of No button of feedback popup.

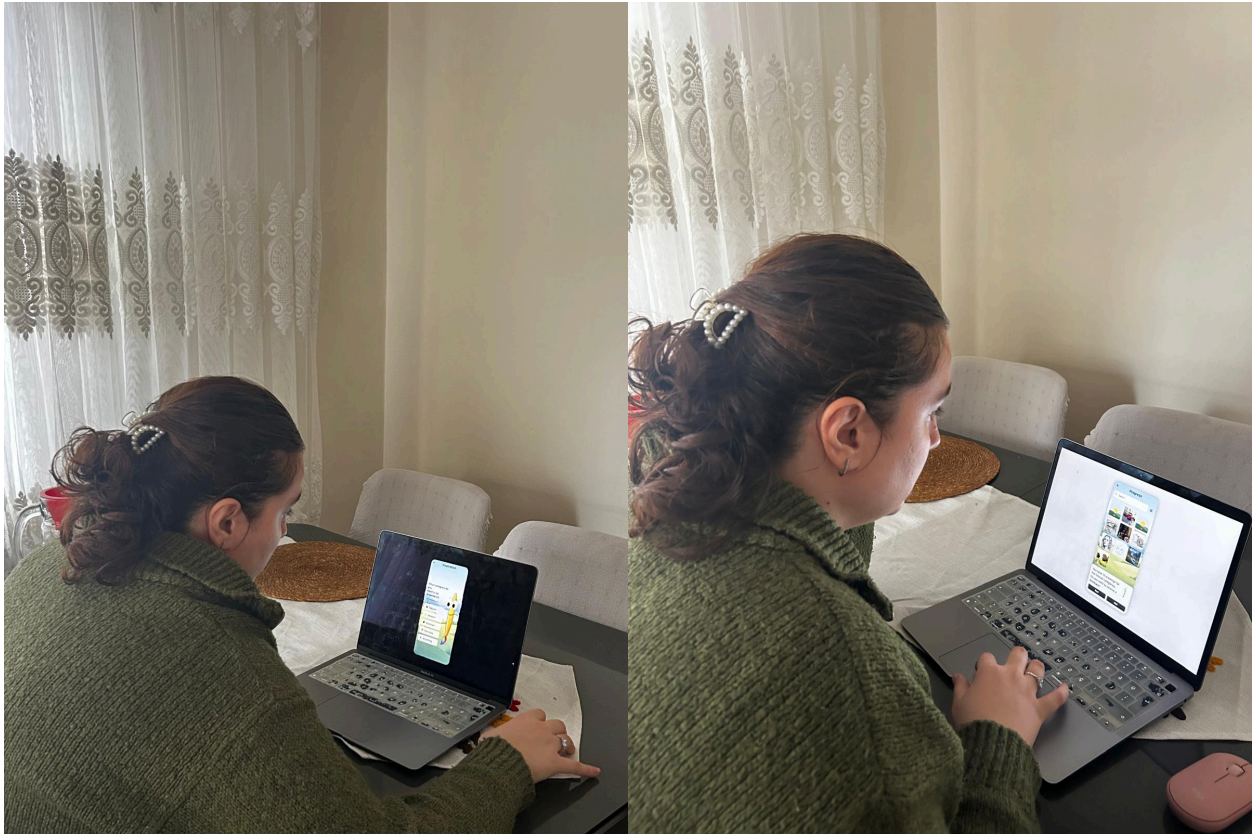

5. "Would you personally use something like this? Why or why not?"

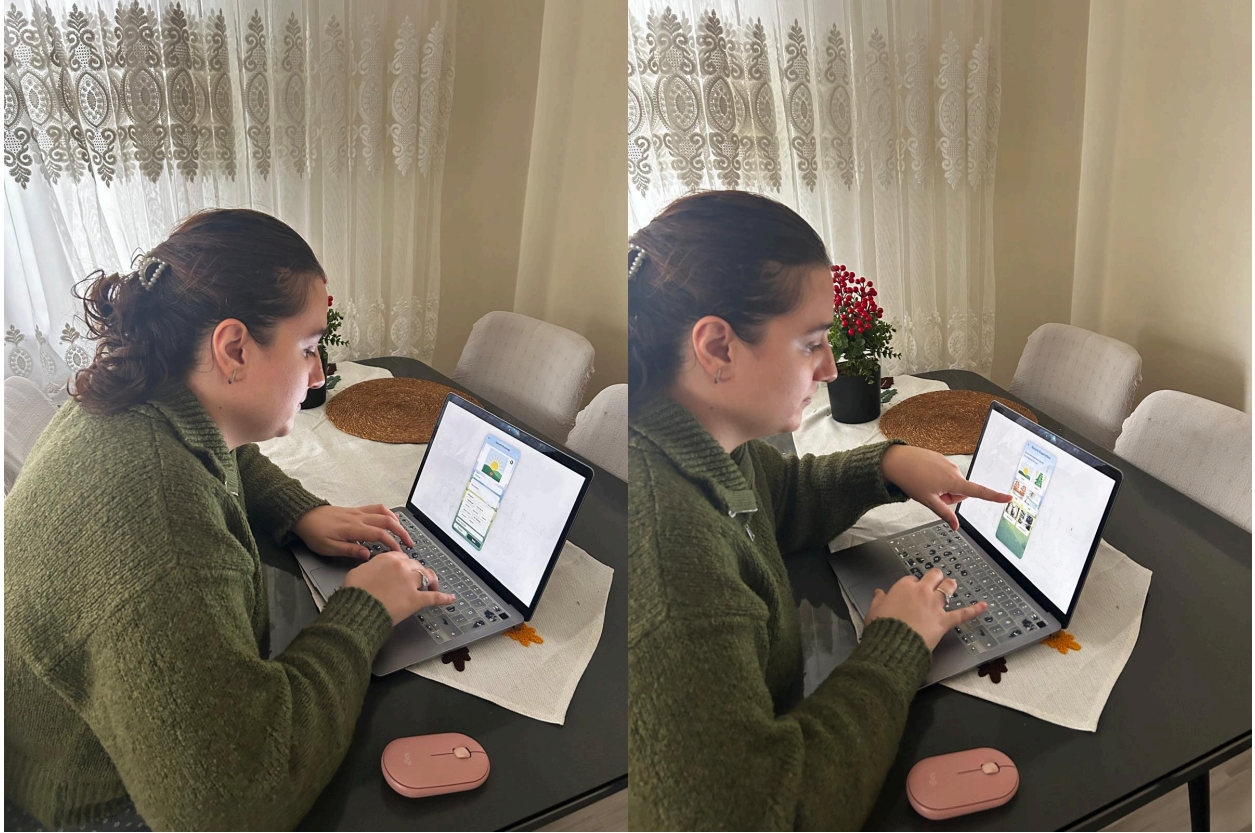

Yes, because I don't like getting criticism from people and I think it is blocking my improvement motivation. Getting an objective comment from AI sounds helpful for my motivation. It is also nice to keep track of my past works.
